Subject: buying campfire rings

Hi Purchasing Agent,

I need your help to purchase some campsite fire rings for the Lake Cascade Park. We have a bunch of old/damaged rings up there that need to be replaced. I need them to be delivered by the end of May so they can be swapped out with the old ones before camping season really gets rolling. Delivery will be to the Park (970 Dam Rd, Cascade, ID). The supplier will need to notify Eddy Enduser at least 3 days in advance to make sure that she will be available. His number is 208-123-2345. The supplier will have to unload the campsite fire rings at the site (they should have a truck with a liftgate and pallet jack, I would think).

We actually need two types of rings:

- Regular fire rings: 30 inch diameter with hinged adjustable grates. 9 inch tall sides with three angle spade leg anchors and 1 inch wide flange around the top edge. Rings rolled from 3/16" thick steel plate and grates will be made from 3/4" diameter steel. Cooking grate adjustment handles need to be made from 3/4" diameter steel and reach outside of the fire ring away from the fire. We need 190 of these.
- ADA Compliant fire rings: 30 inch diameter Rings with heat shields, single level, swivel cooking grates. 23 3/8" tall sides with three angle spade leg anchors. The cooking grates need to be a single welded component using 1/2" diameter steel bars mounted on a 2 3/8" OD steel tube allowing it to swivel 180 degrees. All grate bars should be welded on both sides. Grate handle can never be over the fire. We need 10 of these.

Please let me know if you need any other information.

Thanks,

Valerie
